Sensor Electronic Technology, Inc. Attains ISO9001:2008 Certification

Columbia, SC, USA – January 20, 2010 – Sensor Electronic Technology, Inc. (SETI), world leaders in deep UV LEDs announces it has gained and is operating in full compliance with the International Quality System Standard ISO9001:2008 as of December 13th, 2009.

By meeting this standard SETI has once again established a position of industry leadership. This important milestone is testament to SETI's commitment to quality excellence that is consistent in exceeding customer expectations.

"The ISO9001:2008 certification validates our commitment to quality and the exceptional customer service that we have built over the past 5-years of commercially supplying our deep UV LED products" said Dr. Remis Gaska, President and CEO of SETI.

SETI is the world's only commercial supplier of deep UV LEDs and LED products and offers a catalogue of wavelengths from 240 nm to 400nm at powers from 0.3 mW to 50mW. SETI offers a full portfolio of standard LED and LED Lamps as well as custom-designed devices and systems into markets including analytical instrumentation, optical sensors, process control, medical systems, water and air purification and many others.
